PHYS358: Session 09

Markov Chains: Transition probabilities

We briefly explore the concept of transition probabilities with the program `landofoz.py`. The basic idea you can glean from `11literature_a.pdf`, which you'll find under session 09 on the calendar.

Convince yourself that the implementation is correct, and explore weather forecasts for rain, snow, nice days today. What's the main conceptual difference between weather forecasts in the Land of Oz and (for example) North Carolina?
